

Maternity Care Shortage Areas

Expanding Access to Women Health

The American College of Nurse-Midwives (ACNM) strongly supports the ***“Improving Access to Maternity Care Act of 2015,” (H.R.1209/S. 628)*** introduced by Rep. Mike Burgess (R-TX) and Rep. Lois Capps (D-CA) and Sen. Mark Kirk (R-IL) and Sen. Tammy Baldwin (D-WI) on March 3, 2015.

H.R. 1209/S. 628 creates a health professional shortage area (HPSA) for maternity care services. The goal of this legislation is to identify and address areas of the U.S. that are experiencing significant shortages of full scope maternity care professionals, including certified nurse-midwives and other maternity care providers. This legislation will make it possible for the U.S. Department of Health and Human Services to place eligible professionals within the National Health Service Corp (NHSC) in these areas to address identified shortages of maternity care professionals. These professionals will be placed in eligible medical facilities, including hospitals, birth centers, and other appropriate facilities.

Expanding access to maternity care professionals in underserved areas can reduce overall maternity care costs in the U.S. by ensuring women have access to necessary prenatal care and delivery options.

Background

In a report issued in June of 2013, the Medicaid and CHIP Payment and Access Commission (MACPAC) highlights that having coverage for maternity services does not guarantee access to care. Access to maternity care professionals is a significant issue in many areas of the country due to the changing demographics of maternity care providers, variation among practice environments, and restructuring, regionalization and closure of many maternity care units.¹

During 2013, there were 160.5 million women and girls in the US population, nearly 74 million of whom were of childbearing years. During that year there were 3.9 million births. That same year, there were 40,921 Fellows/Jr. Fellows of the American College of Obstetricians and Gynecologists and 11,392 certified nurse-midwives/certified midwives, for a ratio of approximately 3.3 maternal care providers for every 10,000 women and girls. This ratio is even lower when we consider that a significant percent of the OB/GYNs and CNMs/CMs in the country are not engaged in active patient care.

¹ MACPAC, “Report to the Congress on Medicaid and CHIP,” June 2013, page 21-22.

Eugene DeClercq, a professor in Boston University's School of Public Health found that in 2011, 56 percent of US counties had no CNMs/CMs, 46 percent had no OB/GYNs and 40 percent had neither a CNM/CM nor an OB/GYN. Millions of women live in these areas. Shortages of maternity care providers can result in long waiting times for appointments and/or long travel times to prenatal care and/or birthing sites. Maternity care providers have become particularly prone to workforce challenges due to concerns surrounding professional liability, unpredictable working hours, declining medical student interest, reductions in the numbers of residency programs, and increasing sub-specialization by graduating residents. These factors have contributed to inadequate access to maternal and reproductive care, especially in underserved communities.

The rate of preterm birth in the U.S. was 11.4% in 2014. The rate of low birth weight has risen fairly steadily over a quarter century. The rate in the U.S. was 8.0% in 2013. In 2013, 44% of all maternal childbirth-related hospital stays were billed to the Medicaid program. In 2013, 52% of all maternal childbirth-related hospital stays were billed to private insurers. The two most common conditions billed to private insurance as the primary payer in 2012 were pregnancy and childbirth (14%) and newborns (13%), which together comprised 27% of hospital discharges.

This legislation is cost neutral, as it does not increase the authorization of the National Health Service Corp (NHSC). It will aid in directing existing funding to fully utilize the maternity and primary care scope of practice of midwives and other maternity care providers.

The NHSC mission is to "build healthy communities by supporting qualified health care providers dedicated to working in areas of the United States with limited access to care."² The program incentivizes providers who practice in areas with health care provider shortages by giving them a scholarship or loan repayment benefits.

There are two ways that a provider can be rewarded for providing care in a community with health professional shortages.

- Scholarship program pays tuition and fees; provides a living stipend for students in accredited training programs; scholars must work in a HRSA-approved community-based site following graduation for 2 to 4 years.
- Loan repayment program offers eligible providers up to \$60,000 in loan repayment in exchange for 2 years of service in a NHSC site. In addition, providers have the option to extend their service at the NHSC site and received additional funds for loan repayment.
